Individual CNA Test Options:  
CMA only; Redox/APA only

## METHYL DETOX PROFILE

Blood Collection: (blue tube or swab)

### Individual test options:

Methyl Detox individual gene(s)

Homocysteine (add on)

! To ensure an accurate homocysteine reading, the gold top (serum) tubes:

- 1) Should be gently inverted 5 times
- 2) Allow blood to clot at least 30 minutes in a vertical position
- 3) Centrifuge for 15 minutes at 2200-3000rpm within 1 hour of draw

## CICA /Celiac, IBS, & Crohn's Array

### (Genetic + Serologic)

Blood Collection: (blue tube requires immediate shipment)

### Individual test options:

CICA genetic stand-alone

CICA Antibodies stand-alone

## TELOMERE LENGTH

Blood Collection: (blue tube requires immediate shipment)

## Important MEDICATION Information

It is not necessary to postpone testing if, despite medication use, inflammatory symptoms persist. However, to the extent medication can be reduced prior to testing, the patient should do so, as anti-inflammatory medications may have an effect on test results.

Anti-rejection therapy may reduce test sensitivity.

Note: Medications or supplements:

- If early AM draw, take medications or supplements directly AFTER blood draw
- If possible, DO NOT take any medications 3 to 4 hours before blood draw

! Please **consult with your physician** before stopping or reducing any medications

## Draw Blood from Monday - Sunday

- Ship specimen the same day with prepaid shipping label
- If blood was drawn in the **late afternoon/evening or on Sunday**, ship early AM the next day. If left overnight please store at room temperature (do NOT refrigerate!)
- In case of extreme summer temperature it is advisable to use the frozen ice packs
